

As global temperatures increase the sea level will rise. This could cause problems for sea turtles looking to lay their eggs on a beach that is now under water!

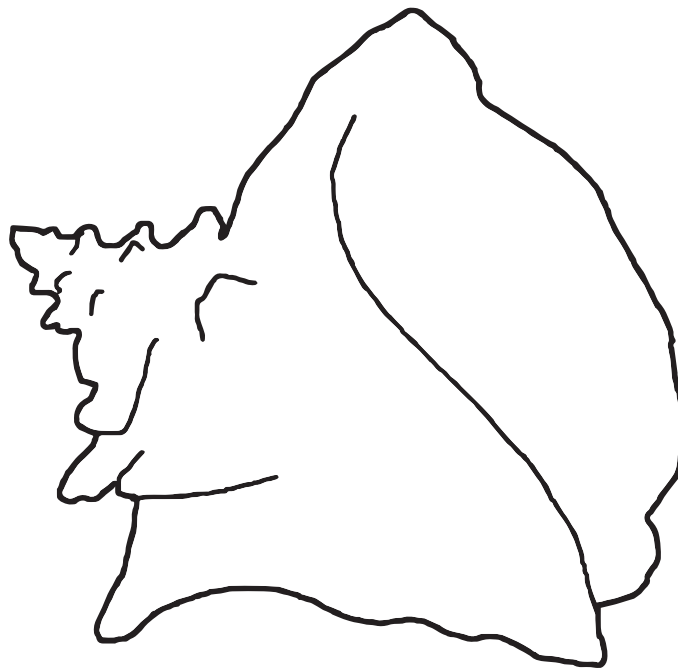

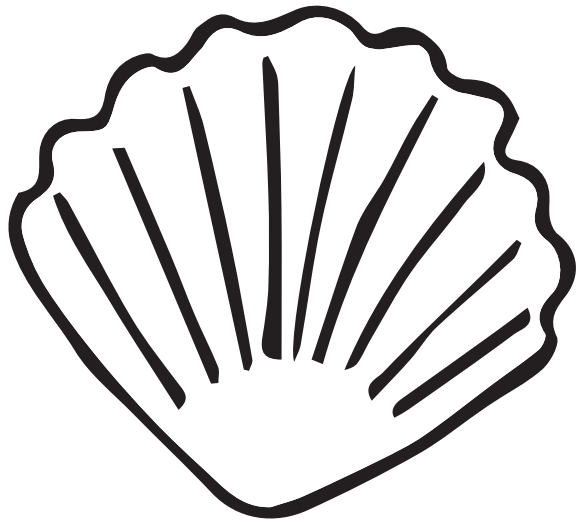

ARTIST: _____

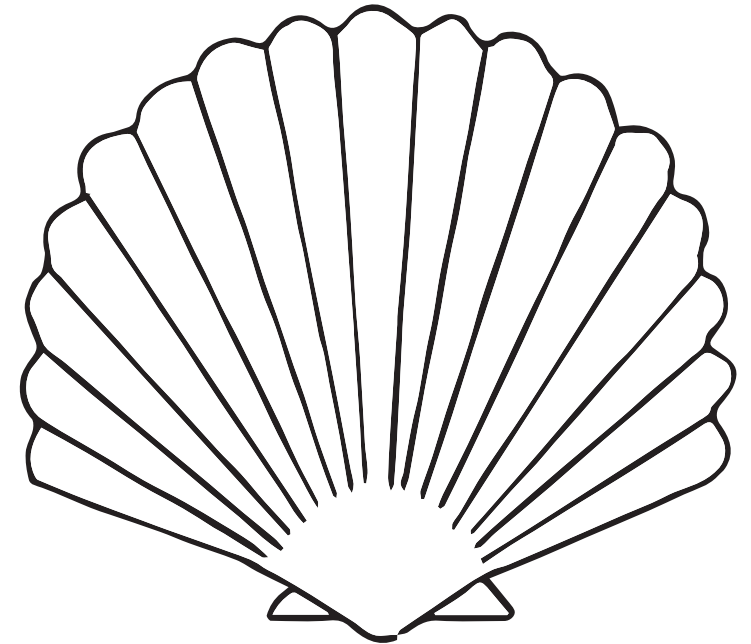

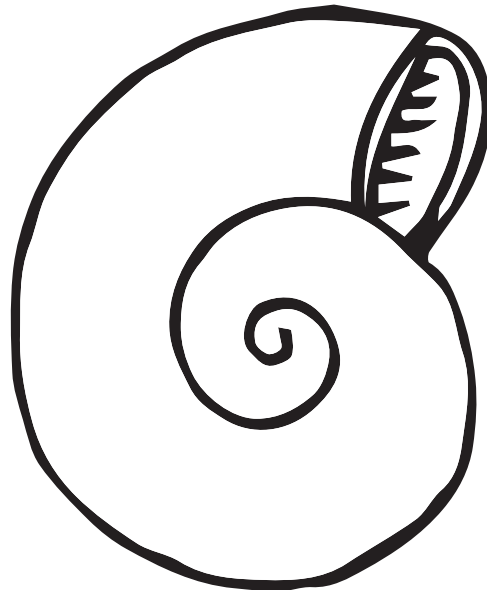

As global temperatures increase sea ice will melt at a faster rate. This becomes a problem for polar bears that need to get out of the water so they can rest.

ARTIST: _____

As the ocean absorbs more carbon dioxide it becomes more acidic. This causes problems for animals that grow and live in shells. The acidic water damages their shell homes.
